mita DC-312RE

High quality copies from a dependable efficiency expert.

The new Mita DC-312RE is a high performance copier that offers many of the features that are usually found only on more expensive, bulkier console copiers.

Size reductions in two different percentages; enlargements in one. And same size copying at a very fast 30 copies per minute. Plus Mita's own exclusive dry toning system for letter-perfect copy quality. A self-diagnosing maintenance system that quickly locates problems for the serviceman, so you save on service calls. And a double cassette paper feeding system that changes paper sizes automatically at the touch of a button.

But perhaps most importantly, the new Mita DC-312RE is built to keep on copying day after day and year after year. Mita copiers have achieved a worldwide reputation for superior dependability. But don't take our word for it. Just ask any Mita owner.

30 fast copies per minute

Fast job turn-around is now a reality. Mita advanced copier technology has made the DC-312RE into an extremely productive workhorse: 30 letter size copies per minute will get you quickly to the end of even your longest runs.

The new Mita DC-312RE.

Reduce at the touch of a button

To reduce all your paperwork to a single standard size, simply press one of two different reduction keys before you press "Print".

For example, ledger size originals (11" x 17") can be conveniently reduced to letter size (8½" x 11") or legal size (8½" x 14"). Legal size originals and computer stock forms (11" x 14") can also be reduced to letter size.

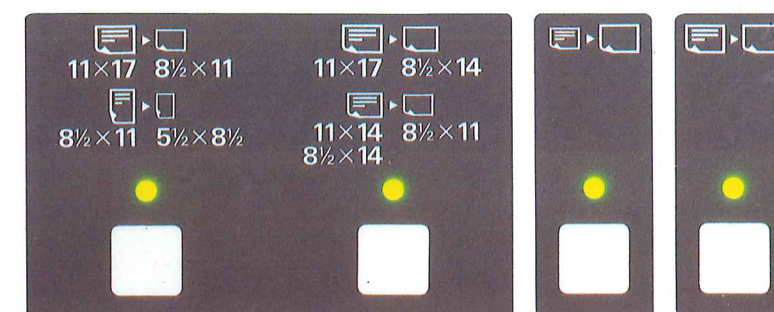

Press clippings, technical drawings and other oversized originals can be reduced just as simply and quickly, too. You can even reduce two letter size originals onto a single letter size sheet. Save money on the cost of paper stock, too.

Versatile enlargement capability

The DC-312RE not only reduces, but it gives you the freedom to enlarge. Make legal size originals into ledger size copies. Or enlarge statement size originals (5½" x 8½") to letter size. Enlargements are easier to read, and a single standard size for paperwork facilitates more convenient filing and mailing, as well as the creation of presentations and reports with a neater appearance.

Same size copying too

Naturally, the DC-312RE can take care of all your normal same size copying needs. The advantage of copying with the DC-312RE is that reduction and enlargement capabilities are available whenever an alternative size would be more appropriate. Now you can satisfy all your reduction, enlargement and same size copying needs with a single machine.

High quality copies. Advanced features. Simple operation.

First copy in less than 6 seconds

In most offices, the one-copy job is especially important because it's frequently the most required one. The DC-312RE gets it done quickly.

Letter-perfect dry copies on plain paper

The DC-312RE delivers odorless, smudge-proof copies every time with Mita's exclusive Automatic Dry Toner Density Control System. It monitors copy quality throughout the copying process, producing dark, solid blacks, clean, clear whites and half-tones that are evenly graduated.

Big 11"×17" copying

Large, ledger size originals can be copied size for size, with no need to cut or paste. Copy any original from 5½"×8½" through a big 11"×17". Even big copies are reproduced quickly and easily.

Simple repeat copying

There's no need to reset the copy quantity whenever you want to repeat a run. Just touch the Print Key; the Mita DC-312RE makes them for you automatically with a memory that cancels itself after 45 seconds.

"Sensor Touch" control panel

Microcomputer technology allowed Mita to put all major DC-312RE controls on a single control panel that is conveniently located right up front. Easy-to-understand, graphically illustrated keys activate with the touch of a finger for fast, easy operation.

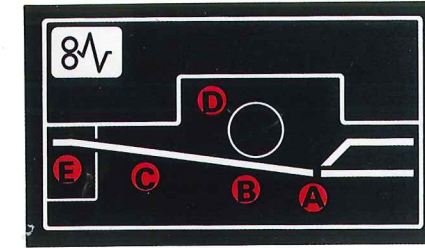

Just select from one to 99 copies and touch the Print Key; everything else is automatic, with copies counted out on a bright digital display as they are produced. Other displays remind the operator whenever the DC-312RE requires additional toner or paper.

"Simulation" Self-Diagnosis Function

It's a rare occurrence when a dependable Mita copier has a mechanical failure. But if one does occur, Mita's new "Simulation" Self-Diagnosis Function will help get the DC-312RE copying again in no time.

If the "Call Serviceman" Indicator Light goes on, simply press the Print Key. One of eight coded indicators, each representing a different DC-312RE operating system, will immediately light up. By relaying this code to the serviceman by telephone, he can come prepared with the necessary parts and tools on his very first visit.

Mita's new "Simulation" Self-Diagnosis Function was designed to keep copier downtime to an absolute minimum while reducing your repair costs.

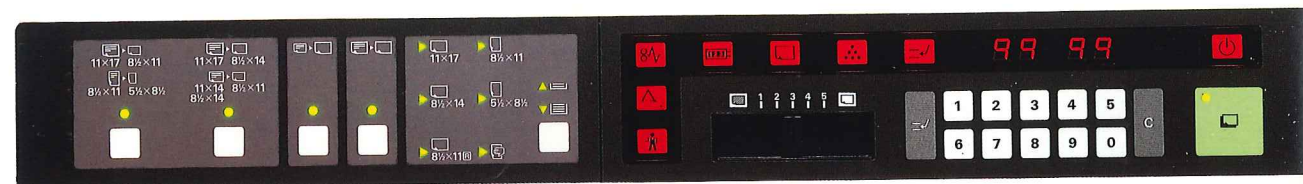

Extensive service network

Mita copiers are backed by one of the most impressive service networks in the industry, so you can expect to find fast, efficient Mita servicing wherever Mita's are sold.

One of the world's most experienced copier companies

Mita has specialized in manufacturing products for the image reproduction industry for almost 50 years, making it one of the world's most experienced copier manufacturers. Moreover, it is one of only a very few copier manufacturers in the world to produce only copiers, a fact which we believe helps Mita to concentrate its experience and resources toward the achievement of just one goal: The production of superior quality copiers that produce superior quality copies.

Twin copy quantity displays

One indicates the number of copies selected. The other counts copies as they're made. The DC-312RE conveniently keeps you informed as to the exact status of your run.

Copy interrupt function

Interrupt any copy run to do a high priority copying job. Just touch the Copy Interrupt Key, make the copies that can't wait, then go back and finish your interrupted run. The DC-312RE's advanced Electronic Copy Memory starts counting copies again right where it left off, to make sure you end up with complete copy sets.

No-guesswork misfeed indicator

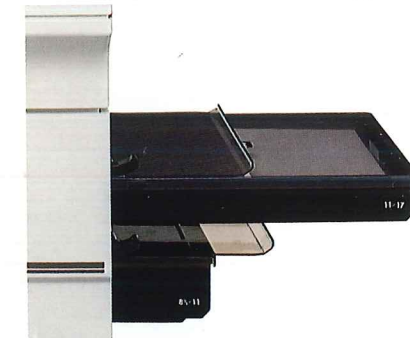

On those rare occasions when a paper misfeed does occur, one of five different indicators will pinpoint the exact location, and the counter will tell you how many sheets misfed. So you'll know right where to look and exactly how many misfed sheets to look for. Afterwards, the DC-312RE's built-in compensation function automatically starts counting off copies again right from the point where the misfeed occurred, so you end up with the correct number.

Copy onto almost anything

Copy onto plain paper, overhead transparencies, adhesive labels, colored stock, letterheads—you name it. They're all a breeze for the new Mita DC-312RE.

Large 250- and 500-sheet paper cassettes

Use the lower 500-sheet cassette for large quantity copy jobs. To switch from one to the other, simply touch the Cassette-Change Key. No more awkward paper handling; now changing paper sizes is as easy as changing your mind.

Specifications

Process	Indirect Dual Component Dry Toner
Type	Desk-top
Originals	Sheets, books, 3-dimensional objects
Copy Sizes	Maximum 11"×17", Minimum 5½"×8½"
Copying Speed	30 copies per minute (8½"×11"), 18 copies per minute (11"×17") (Equal-size copying)
Warm-up Time	3 Minutes or less
First Copy Speed	6 seconds (8½"×11")
Magnifications	1:1, 1:0.652, 1:0.758, 1:1.271
Light Source	Halogen lamp

Continuous Copying	Up to 99 copies
Paper Feed System	Dual cassette, automatic sheet feed
Cassette Capacities	250 sheets (upper), 500 sheets (lower) (20 lbs)
Toner Dispensing System	Automatic Toner Density Control
Power Source	AC 115V, 60Hz
Dimensions	32½"(W)×24½"(D)×20½"(H)
Weight	231 lbs

*For best copy results, we recommend that you use only Mita original consumables for your Mita copier.
