

Keypad Controller for Facsimiles

*Finally, a control device
for facsimile machines*

Monitor Fax Machine Usage With the KCFx

- Records usage by both account and department number for proper accountability and maximum flexibility.
- Improves security by preventing unauthorized Faxes.
- Logs Fax duration, time and date sent, cost per minute, account and optional department numbers used, transmission type and Fax number called for accurate usage summary.

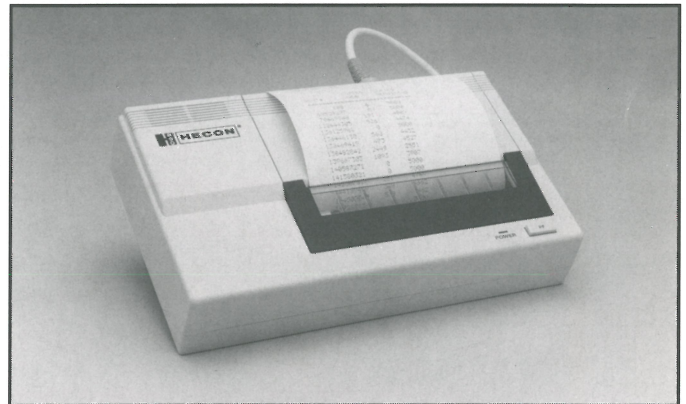

The Keypad Controller for Facsimiles

Specifications

- Phone line Connector - RJ11
- Fax Connector - RJ11
- Power Supply Voltage - 115VAC 60 Hz
- Part Number - A0603000

Options

At the end of the accounting period, printed reports can be generated for most records and billing purposes. The optional KCC printer can be used with the KCFx to generate six different types of reports without interrupting FAXes.

HECON's optional KCC Printer

Features

The Keypad Controller for Facsimiles (KCFx) is the ideal solution to accountability and access problems associated with FAX machine usage. The KCFx tracks up to 1000 account numbers and 200 optional department numbers. Plus, the history of 800 transmissions can be stored in memory. This is adequate to accommodate even the busiest FAX machine.

Retrieving the information is fast and easy. Using the optional portable printer, you can generate various reports in either detail or summary.

The KCFx is designed to accommodate broadcasting, distributed broadcasting, polling, delayed transmissions and automatic redial. It also detects when the fax machine phone is used to call a non-fax phone number. For easy installation of the KCFx, just plug the phone line into it, and plug the cable from the KCFx into the FAX machine. That's it! No modification to the FAX machine is necessary. A connector lock-in device is included to provide you with added security, so the cables can't be easily removed once attached.

Once installed, the KCFx prevents FAXes from being sent without entry of an authorized account and optional department number, yet does not interfere with incoming FAXes. This provides you with an accurate allocation of costs, with no interference to reception.
